                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /Clone lib="Sugano mouse liver mlia"
//Clone lib="Sugano mouse liver mlia"
//Clone lib="Sugano mouse liver mlia"
//Clone libe" Vector: pmBIBS-FL3; Site 1: DraIII
(CACCTGTGG); Ist Etrand cDNA
was primed with an oligo(dT) primer
[ATCTGGCCTTTTTTTTTTTTTTTTTT], double-stranded cDNA was
ligated to a DraIII adaptor [TGTTGGCCTACTGG], digested
and cloned into distinct DraIII sites of the pmE18S-FL3
vector (5' site CACCTGTGG, 3' site CACCTAGTG). XhoI should
be used to isolate the cDNA insert. Size selection was
performed to exclude fragments <1.5kb. Library
conserructed by Dr. Sumio Sugano (University of Tokyo
Institute of Medical Science). Custom primers for
sequencing: 5' end primer CTTCTGCTCTAAAAGCTGCG and 3' end
primer CGACCTGCAGCTCGAGCACA."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Title:
Perfect score:
                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            length: 0

US-09-972-916A-4

Sequence 4, Application US/09972916A Patent No. US20020107198A1

GENERAL INFORMATION:
APPLICANT: Thule, Peter M.
APPLICANT: Thule, Peter M.
TITLE OF INVENTION: GLUCOSE SENSITIVE REGULATOR OF INSULIN TRANSCRIPTION
FILE REFERENCE: US 1292/01 (VA)
CURRENT APPLICATION NUMBER: US/09/972,916A
CURRENT FILING DATE: 2001-10-10
PRIOR APPLICATION NUMBER: US 60/239,113
PRIOR FILLING DATE: 2000-10-11
NUMBER OF SEQ ID NOS: 6
SEQ ID NO 4
LENGTH: 321
TYPE: DNA
ORGANISM: Artificial Sequence

FEATURE:

```

US-09-949-001-30 RESULT 1

Sequence 30, Application Patent No. 6825336 GENERAL INFORMATION:
APPLICANT: VENTER, J.

Application US/09949001

, APPLICANT: VENTER, J. Craig et al.
; TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
; TITLE OF INVENTION: WITH OSTEOPOROSIS, METHODS OF DETECTION AND USES THEREOF
; FILER REPERENCE: CL000789
; CURRENT APPLICATION UNUMBER: US/09/949,001
; CURRENT FILING DATE: 2003-01-15
; PRIOR APPLICATION NUMBER: 60/231,323
; PRIOR FILING DATE: 2000-09-08
; NUMBER OF SEQ ID NOS: 848
; SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 30
SECTIMARE: FastSEQ for Windows Version 4.0

Sequence 36, Application US/09949001
Sequence 36, Application US/09949001
Patent No. 6825336
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH OSTEOPOROSIS, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CL000789

```
